Summary

Driven by the challenge of turning data into decisions, I have developed machine learning models, AI-powered applications, and analytics solutions across healthcare, customer intelligence, and automation domains. My experience spans the full lifecycle of data-driven products—from data preparation and model development to deployment and user-facing applications—enabling organizations to extract value from complex information and make evidence-based decisions.

Education

K. Ramakrishnan College of Engineering	B.Tech • 7.8
Computer Science And Business Systems	Trichy,India • 2021-2025

Experience

Gilbert Research Center	Coimbatore,India
Data Science Intern	Jul 2025 - Sep 2025

- Healthcare datasets often contain complex patterns that make early clinical diagnosis challenging. Developed and evaluated machine learning models to identify predictive indicators and support research-driven diagnostic decision-making.
- Addressed data quality challenges through preprocessing, feature engineering, and validation techniques, improving model reliability and analytical accuracy.
- Collaborated with senior data scientists to transform raw clinical data into actionable insights, enabling researchers to better understand key factors influencing diagnostic outcomes.
- Applied statistical analysis and machine learning methodologies to solve healthcare research problems, contributing to scalable and evidence-based analytical solutions.

Infilabs HealthTech	Trichy,India
Software Development Intern	Aug 2023 - Sep 2023

- Healthcare professionals often face inefficiencies in managing and accessing patient-related information. Developed Python-based tools to streamline data handling and improve operational workflows.
- Designed solutions focused on reducing manual effort, improving data accessibility, and supporting more efficient information management processes.
- Leveraged collaborative development practices and version control to deliver maintainable software solutions aligned with organizational requirements.

Projects

SmartML Prep Project

- Data preprocessing is often one of the most time-consuming stages of machine learning development. Built an AI-powered platform to automate and simplify this process.
- Implemented intelligent recommendations using Gemini API to address missing values, class imbalance, and feature engineering challenges.
- Designed an end-to-end workflow enabling users to upload datasets, preview transformations, and export cleaned data ready for model development.
- Reduced manual preprocessing effort and improved accessibility of machine learning workflows for users with varying technical expertise.

Customer Churn Prediction Project

- Customer attrition can significantly impact business revenue and growth. Developed a predictive analytics solution to identify customers most likely to discontinue services.
- Performed exploratory data analysis, feature engineering, and preprocessing on a dataset of over 50,000 customer records to uncover factors influencing churn behavior.
- Trained and evaluated machine learning models to generate accurate predictions, achieving an F1-score of 0.78.
- Delivered a deployable solution that enables organizations to proactively target at-risk customers and improve retention strategies.

Community Group Chat Application

- Community groups often rely on fragmented communication channels, leading to reduced engagement and inefficient information sharing. Developed a real-time communication platform to facilitate seamless community interaction.
- Designed and implemented secure user authentication, including email verification , to enhance platform reliability and user trust.
- Built real-time messaging functionality using [Socket.IO](#), enabling instant communication and improved user engagement.
- Delivered a scalable full-stack solution that supports collaborative communication within community-driven environments.

Skills

- 🔗 Programming & Data Handling: C · C++ · Python · Pandas · NumPy · SQL
- 🔗 Machine Learning & Visualization: Scikit-Learn · Seaborn · Microsoft Power BI · Matplotlib
- 🔗 Web Development: HTML · CSS · Javascript · React · Flask
- 🔗 Frameworks & Tools: Git · Tailwind CSS · Github · Tensorflow
- 🔗 Soft Skills: Teamwork · Problem Solving · Team Collaboration · Adaptability

Certifications

Salesforce Administrator Virtual Internship	jan 2024
Salesforce	
Google Cloud Career Readiness - Associate Cloud Engineer Track	Dec 2024
