Profile Summary

Innovative Python Developer & Data Science enthusiast skilled in building machine learning models, REST APIs, and scalable analytics solutions. Proficient in Python, Pandas, NumPy, Flask, SQL, and cloud platforms (Azure, GCP). Experienced in full-stack development, workflow automation, and data-driven decision-making, delivering actionable insights and efficient, high-impact solutions through collaborative execution.

Technical Skills

Programming & Data Handling: C · C++ · Python · Pandas · NumPy · SQL

Machine Learning & Visualization: Scikit-Learn · Seaborn · Microsoft Power BI · Matplotlib

Web Development: HTML · CSS · Javascript · React · Flask

Frameworks & Tools: Git · Tailwind CSS · Github · Tensorflow

Cloud & Deployment: Google Cloud Platform · Microsoft Azure

Soft Skills: Teamwork · Problem Solving · Team Collaboration · Adaptability

Projects

Customer Churn Prediction (Telecom) · predicting-customer-churn-in-a-telecom.onrender.com

- Developed logistic regression and decision tree models on a 50,000-record customer dataset, achieving a 0.78 F1-score in churn prediction.
- Implemented preprocessing (feature encoding, scaling) and trained models with classification reports.
- Deployed the solution on Render for real-time churn prediction.
- Tech Stack: Python, Pandas, Scikit-learn, Flask, Matplotlib

Community Group Chat Application · bakabyte-the-community-app.onrender.com

- Full-stack community chat app with real-time messaging using Flask, Socket.IO, and SQLite.
- Integrated authentication with email verification and password reset.
- Tech Stack: Flask, Tailwind CSS, Socket.IO

SmartML Prep – AI-Powered Data Preprocessing Tool · smartml-prep.onrender.com

- Built and deployed a web app that auto-detects ML tasks (classification, regression, clustering) and generates optimized data preprocessing steps.
- Integrated Gemini API to suggest context-aware handling of missing values, class imbalance, and feature engineering.
- Enabled dataset upload, preprocessing preview, and download of cleaned data and JSON summaries.
- Deployed on Render with secure environment handling and CI/CD via GitHub.
- Tech Stack: Python, Streamlit, Google Gemini API, Pandas, Scikit-learn, Pydantic, Render

Professional Experience

Data Science & Machine Learning Intern · Gilbert Research Center · Remote

Jul 2025 - Sep 2025

- Working on clinical diagnostic prediction and research-focused data science solutions.
- Engaged in building and evaluating ML models for healthcare-related analytics.

- Collaborating with senior data scientists to develop scalable solutions and reports.

Software Development Intern · Infilabs HealthTech · Remote

Aug 2023 - Sep 2023

- Built Python-based healthcare tools for efficient patient data handling.
- Integrated cloud storage for seamless data access and version control using Git.

Salesforce Administrator Virtual Intern · Salesforce · Remote

Nov 2023 - Jan 2024

- Managed Salesforce CRM workflows, dashboards, and reports to optimize sales operations.
- Completed Salesforce Admin training and hands-on platform experience.

Education

K. Ramakrishnan College of Engineering | B.Tech

Grad Jul 2025

Computer Science and Business Systems (CSBS) · Grade: 7.75
